## Reconnaissance

Adalah sebuah fase persiapan sebelum (attacker) melakukan penyerangan, dimana kegiatan intinya adalah mengumpulkan informasi sebanyak mungkin mengenai sasaran. Teknik ini akan menyertakan network scanning baik melalui jaringan internal atau external yang tentu saja tanpa mengantongi ijin.

Pada Kasus ini saya menggunakan 4 website dan 2 aplikasi untuk mengidentifikasi(Reconnaissance) destination yang diinginkan.

Website :

1. whois.com
2. internet archive wayback machine
3. netcraft
4. Robtex

Aplikasi :

1. VisualRoute
2. Wireshark

Website yang dituju yaitu :

1. liputan6.com (Dalam Negeri)
2. kotaprabumulih.go.id (Government)
3. <https://www.inetdaemon.com> (Luar Negeri)

# I. Liputan6.com

Melalui Website Robtex

- Disini bisa dilihat bahwa liputan6.com memiliki dua ip =
- 52.74.4.153
- 54.169.198.155

Lalu terdapat quick info,dan reserve

## Ada records

The screenshot shows a web browser window with the URL `www.robtx.com/dns-lookup/liputan6.com`. The page displays a section titled "RECORDS" with a sub-header "Hierarchical analysis of the entity". ### Sender Policy Framework

A host's Sender Policy Framework (SPF) describes who can send mail on its behalf. This is done by publishing an SPF record containing a series of rules. Each rule consists of a qualifier followed by a specification of which domains to apply this qualifier to. For more information please see [openspf.org](https://openspf.org).

Qualifier	Mechanism	Argument
+(Pass)	mx	
+(Pass)	include	_spf.google.com
~(SoftFail)	all	

Modifiers extend the functionality of SPF records. The most common one is the redirect which indicates another host contains the SPF record being searched for.

**Sender Policy Framework**

A host's Sender Policy Framework (SPF) describes who can send mail on its behalf. This is done by publishing an SPF record containing a series of rules. Each rule consists of a qualifier followed by a specification of which domains to apply this qualifier to. For more information please see [openspf.org](https://openspf.org).

Qualifier	Mechanism	Argument
+(Pass)	a	
+(Pass)	mx	
+(Pass)	ip4	103.15.226.60
~(SoftFail)	all	

Modifiers extend the functionality of SPF records. The most common one is the redirect which indicates another host contains the SPF record being searched for.

### Sender Policy Framework

A host's Sender Policy Framework (SPF) describes who can send mail on its behalf. This is done by publishing an SPF record containing a series of rules. Each rule consists of a qualifier followed by a specification of which domains to apply this qualifier to. For more information please see [opnsf.org](https://opnsf.org).

Warning: It appears that this host does not have an SPF record. Setting up an SPF record helps prevent the delivery of forged emails from your domain.

### DMARC

DMARC (Domain-based Message Authentication, Reporting and Conformance) is a mechanism for domain owners to indicate how mail purporting to originate from their domain should be authenticated. It builds on SPF and DKIM, providing a method to set policy and to give reporting of failures. For more information please see [dmarc.org](https://dmarc.org).

This host does not have a DMARC record.

### Web Trackers

Web Trackers are third-party resources loaded onto a webpage. Trackable resources include social sharing widgets, javascript files, and images. These trackers can be used to monitor individual user behaviour across the web. Data derived from these trackers are primarily used for advertising or analytics purposes.
