- **CVE**

- ✓ CVE-2019-7401

NGINX Unit before 1.7.1 might allow an attacker to cause a heap-based buffer overflow in the router process with a specially crafted request. This may result in a denial of service (router process crash) or possibly have unspecified other impact.

✓ CVE-2018-8059

The Djelibeybi configuration examples for use of NGINX in SUSE Portus 2.3, when applied to certain configurations involving Docker Compose, have a Missing SSL Certificate Validation issue because no `proxy_ssl_*` directives are used.

✓ CVE-2018-16845

nginx before versions 1.15.6, 1.14.1 has a vulnerability in the `ngx_http_mp4_module`, which might allow an attacker to cause infinite loop in a worker process, cause a worker process crash, or might result in worker process memory disclosure by using a specially crafted mp4 file. The issue only affects nginx if it is built with the `ngx_http_mp4_module` (the module is not built by default) and the `.mp4.` directive is used in the configuration file. Further, the attack is only possible if an attacker is able to trigger processing of a specially crafted mp4 file with the `ngx_http_mp4_module`.
